## 1. Introduction

### 1.1 Background:

Both Mumbai and New York city are densely populated, multicultural cities. To a lesser or greater extent people come from all over the world to build a career and create their fortunes in these cities. Mumbai is the financial capital of a country of 1.3 billion people, home to the busiest Indian Airport and the busiest Indian seaport in addition to India's biggest film industry. It is no wonder that Mumbai with its highly dynamic vibrant culture is called Maximum city and attracts multi-cultural people from people from all over the world. New York City(NYC) has been called by many different names such as 'Fun city', 'The capital of the World' and 'The city that never sleeps'. NYC is the most populous city of the United States of America. It is described as the cultural, financial, and media capital of the world. NYC influences art, commerce, entertainment, technology, education politics and sports amongst other things. Thus people from many diverse backgrounds visit and live in this city.

### 1.2 Business Problem

In order to accommodate the people choosing to move (for business purposes) from Mumbai to NYC or vice versa one needs information about the similarities in the neighbourhoods of these cities. Here we are attempting to analyse the neighbourhoods in each of these two cities and find similarities in terms of quality of life offered by venues catering to food, entertainment etc. highly rated by and most popular amongst the current residents of the neighbourhood of these two amazing cities of the world.

### 1.3 Target Audience

People currently living in Mumbai and planning to move to NYC (for work or leisure) in the near future (and vice versa) would be interested in the similarities of the neighbourhoods between these cities.

## 2. Data

### 2.1 Data Sources:

We will need and use the following data sources:

1. List of neighbourhoods in Mumbai with coordinates  
This [Mumbai Neighbourhoods](#) page provides details about Mumbai neighbourhoods data along with coordinates.
2. List of neighbourhoods in NYC with coordinates  
This [New York Neighbourhoods](#) page provides details about NYC neighbourhoods data along with coordinates.
3. Details of popular food and entertainment options, with user ratings, in the neighbourhoods  
This [Foursquare](#) API can be used to get detailed information about food and entertainment venues in various geolocations all around the world, including Mumbai and NYC neighbourhoods.

For example: We can get information such as restaurants serving 'Indian' food along with the User ratings about neighbourhoods using the Foursquare API. The API also provides detailed information such as User reviews/tips and additional information about the User themselves such as other places the User might have visited/rated.

### 2.2 Data Cleaning

#### 2.2.1 Mumbai Neighbourhood data

The Mumbai Neighbourhood Data scraped from the data was stored in the data frame. The data types of latitude and longitude were changed to float for ease of processing via the Foursquare API.

Incorrect Latitudes and Longitudes of a few neighbourhoods had to be manually corrected

NAs were removed from the data after embellishment with the venues data from the Foursquare API

## 2.3 Feature Engineering

A rich collection of features was selected from the Foursquare API as follows

'Neighbourhood'

'Location'

'Latitude'

'Longitude'

'VenueName'

'VenueLatitude'

'VenueLongitude'

'VenueCategory'

The 176 unique venue categories (for Mumbai) were converted into features using one-hot-encoding

Here are the top venue categories for Mumbai:

### 3 Methodology

section which represents the main component of the report where you discuss and describe any exploratory data analysis that you did, any inferential statistical testing that you performed, if any, and what machine learnings were used and why.

#### 3.1 Exploratory Data Analysis

We did an in depth analysis of the Mumbai/NYC neighbourhood data as follows:

Here is a sample of the Mumbai neighbourhoods we analysed:

We did a similar exploratory analysis of the Ney York city Manhattan district.

### 3.2 Segmenting/Clustering

We segmented the Mumbai/Manhattan neighbourhoods into 6 clusters using the Kmeans clustering algorithm. We find the optimal K using the elbow method as illustrated in the following diagram

Fig. 5. find the optimal K using the elbow method

Here are the clustered Mumbai neighbourhoods with the top venue categories

## 4 Results

### 4.1 Mumbai Data

We observe that cluster 2 consists of neighbourhoods belonging to the quintessential "old" Mumbai with venues overbearingly depicting classical tastes such as Jewellery, cup cake, grocery, plaza, beach, playground etc.

We observe that cluster 4 consists of somewhat affluent neighbourhoods with top venues of specialized restaurants, cafes, ice cream, bars and the sea side with a focus on entertainment

We observe that Cluster 6 consists of far flung distant suburbs which are not considered affluent and whose 2nd most common venue is a train station with a focus on daily commute rather than entertainment followed by Yoga with a focus on fitness

### 4.2 Manhattan Data

Cluster 1 seems to have a round the world/immigrant feel with top venues such as Latin American, Mexican and Chinese restaurants and Deli/Bodegas.

Cluster 2 consists of affluent neighbourhoods such as the financial district with top venues such as specialty restaurants, cocktail bars, wine bars and such rich tastes in lifestyle with a focus on the good life and entertainment

Cluster 3 seems to have a global, bohemian, artistic feel with top venues such as Italian, Korean, African and Chinese restaurants and Deli/Bodegas, parks, plazas, concert hall, indie movie theatre and such rich tastes in lifestyle with a focus on the world food, art and entertainment

## 5 Discussion

Thus we can see that Cluster 2 of Manhattan seems to be similar to cluster 4 of Mumbai and people living in the Cluster 2 of Manhattan would most probably feel at home living in cluster 4 of Mumbai and vice versa.

## 6 Conclusions

We have successfully identified similar neighbourhoods clusters in the cities of Mumbai and NYC, Manhattan district as we set out to do.

## 7 Future Directions

As a next step we could look at other districts of NYC and also the neighbouring Jersey city to compare with Mumbai.
